TEMPERATURE AND HUMIDITY SENSOR

Node-RED

MQTT

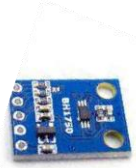
ARDUINO-UNO

L293D (16 PIN IC)

SOIL MOISTURE SENSOR

IBM IoT CLOUD

MOBILE APP



LIGHT INTENSITY SENSOR

pH SENSOR

OPEN WEATHER API

- The different soil parameters (temperature, humidity, light intensity, pH level) are sensed using different sensors and the obtained value is stored in IBM cloud.

- Arduino uno is used as a processing unit which processes the data obtained from sensors and weather data from weather API.

- Node red is used as a programming tool to wire the hardware, software and APIs. The MQTT protocol is followed for communication.

- All the collected data are provided to the user through a mobile application which was developed using MIT app inventor. The user could make decision through an app, whether to water the crop or not depending upon the sensor values.
